

## IS YOUR AI CONTEXT-READY?

BASED ON THE SLACK EBOOK'S FIVE CONTEXT LAYERS

### 01 CONVERSATIONAL CONTEXT (THE "WHY")

- Can your AI access relevant conversation history, not just structured data?
- Does it understand the reasoning behind past decisions, not just the outcomes?

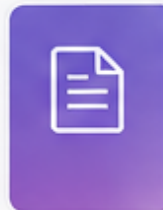

### 02 STRUCTURED DATA (THE "WHAT")

- Is your AI connected to your core business systems (CRM, ERP, project tools)?
- Can it distinguish between current and stale data?

### 03 PROCESS CONTEXT (THE "ACTION")

- Does your AI understand how work moves through your organization — approvals, handoffs, status changes?
- Can it trigger or adapt workflows, or only suggest them?

### 04 KNOWLEDGE & FILES (THE "HOW")

- Does your AI have access to relevant documentation, playbooks, and institutional knowledge?
- Is that knowledge current, or is it working from outdated files?

### 05 ORGANIZATIONAL CONTEXT (THE "WHO")

- Does your AI know who owns what decisions?
- Can it route work to the right person, or does it treat the org as a flat list of names?

#### SCORING GUIDE

**0-4 LAYERS COVERED = AI IS LIKELY FRUSTRATING YOUR TEAM MORE THAN HELPING**

**5+ LAYERS = YOU'RE POSITIONED TO SCALE EFFECTIVELY**
